AUTOMOTIVE AI STRATEGY

DVVI PLATFORM

Precision Vehicle Valuation through Machine Learning

Min Kaung Thant

The Problem

NEGOTIATION FRICTION

Information asymmetry leads to lost dealer margins and consumer distrust.

Why ML?

Complexity

20+ variables.

Scale

100k+ Units.

Data

High availability.

Success Metrics

OUTCOME

WIN-RATIO

Conversion of valuations to sales.

OUTPUT

M.A.E.

Reducing prediction error.

Relevant Factors

01 Vehicle Specs

02 Usage & History

03 Regional Demand

ML System Design

Cloud
Centralized Data

Offline
Batch Learning

Online
Real-time Predictions

Validation Plan

Shadow Mode Testing
Comparing AI output vs. Human Experts in real-time.

A/B Pilot Testing
Testing conversion rates across 5 select dealerships.

Production Risks

DATA DRIFT

Seasonal market shifts require 14-day retraining cycles.

CONCEPT DRIFT

Macro-events (EV incentives) change pricing logic.
